Preface	7	23	Chronic lymphocytic leukaemia	64	
1	Haemopoiesis: physiology and pathology	8	24	Myeloma	66
2	Normal blood cells I: Red cells and platelets	12	25	Lymphoma I: Hodgkin lymphoma (Hodgkin's disease)	68
3	Normal blood cells II: Granulocytes	16	26	Lymphoma II: Non-Hodgkin lymphoma	70
4	Normal blood cells III: Monocytes and the reticuloendothelial system	18	27	Myeloproliferative disorders	73
5	Normal blood cells IV: Lymphocytes	20	28	Normal haemostasis	78
6	Clinical assessment	23	29	Disorders of haemostasis: vessel wall and platelets	82
7	Laboratory assessment	26	30	Disorders of coagulation I: Inherited	86
8	Benign disorders of white cells: granulocytes, monocytes, macrophages and lymphocytes	30	31	Disorders of coagulation II: Acquired	88
9	Iron I: Physiology and deficiency	32	32	Thrombosis and thrombophilia	90
10	Iron II: Overload and sideroblastic anaemia	34	33	Anticoagulation	92
11	Megaloblastic anaemia I: Vitamin B ₁₂ deficiency	36	34	Haematological aspects of systemic disease I: Inflammation—malignancy	94
12	Megaloblastic anaemia II: Folate deficiency and other macrocytic anaemias	40	35	Haematological aspects of systemic disease II: Renal, liver, endocrine—pregnancy	96
13	Haemolytic anaemias I: General	42	36	Haematological aspects of systemic disease III: Infection, amyloid	98
14	Haemolytic anaemias II: Inherited membrane and enzyme defects	44	37	Blood transfusion	100
15	Haemolytic anaemias III: Acquired	46	38	Stem cell transplantation	106
16	Haemolytic anaemias IV: Genetic defects of haemoglobin	48	39	General aspects of treatment	108
17	Haemolytic anaemias V: Inherited defects of haemoglobin—sickle cell disease	50	Appendices		
18	Bone marrow failure	52	I	Cluster of differentiation nomenclature system	111
19	Haematological malignancy: basic mechanisms	54	II	Further reading	112
20	Chronic myeloid leukaemia	56	III	Sample questions and case histories	113
21	Myelodysplasia	58	Index 119		
22	Acute leukaemia	60
