

met in each volume. We thank them for their diligence in writing texts which address these aims and, where we felt that editorial changes were essential, for graciously accepting these. We hope and believe that the end result will be seen as a comprehensive and valuable two volume compendium of the best of current methodology in this subject area. Because of the scientific quality of the contributions and the deliberately explanatory style of writing, we are confident that, like their predecessor, these books will rightfully enjoy popularity among both newcomers to the field and more experienced researchers.

Leeds  
February 1993

David Hames

# Contents

<i>List of contributors</i>	xviii
<i>Abbreviations</i>	xx
<b>1. Synthesis and purification of RNA substrates</b>	<b>1</b>
<i>Benoit Chabot</i>	
<b>1. Introduction</b>	1
Creating an RNase-free environment	1
<b>2. Synthesis of RNA substrates</b>	2
Preparation of template DNA	3
Transcription using SP6, T3, and T7 RNA polymerases	8
Purification of <i>in vitro</i> RNA transcripts	14
<b>3. Purification of RNA from cells</b>	21
Purification of total RNA	21
Purification of cytoplasmic RNA	24
Purification of poly(A) <sup>+</sup> RNA	25
<b>4. Purification of snRNAs</b>	27
<b>5. Purification of other RNAs</b>	28
Acknowledgements	28
References	28
<b>2. Characterization of RNA</b>	<b>31</b>
<i>Paula J. Grabowski</i>	
<b>1. Introduction</b>	31
<b>2. Isolation of RNA</b>	31
<b>3. Procedures for establishing the identity of spliced RNAs</b>	32
Introduction	32
Basic nuclease S1 analysis	32
Combined RNase H and nuclease S1 analysis	38
RT-PCR analysis	40
Primer extension analysis of RNA	43
Northern blot analysis with exon and intron probes	46

4. Mapping of RNA branchpoints and 5' ends of introns	49
Introduction	49
Mapping RNA branchpoints by primer extension	50
Mapping the 5' end of an intron	53
Acknowledgements	55
References	55
<b>3. Splicing of mRNA precursors in mammalian cells</b>	57
<i>Ian C. Eperon and Adrian R. Krainer</i>	
1. Introduction	57
2. Analysis of pre-mRNA splicing in mammalian cells	58
Expression of exogenous genes	58
Analysis of RNA expressed	61
3. Analysis of RNA splicing in metazoan nuclear extracts	73
Preparation of active extracts	73
Splicing reactions <i>in vitro</i>	75
Depletion of components from nuclear extracts	82
4. Fractionation of splicing extracts and biochemical identification of splicing factors	83
Biochemical fractionation strategies	83
Purification procedures for specific splicing factors	90
Isolation of cDNAs for splicing factors and expression of the recombinant proteins	98
Acknowledgements	98
References	98
<b>4. Isolation and characterization of ribonucleoprotein complexes</b>	103
<i>Angus I. Lamond and Brian S. Sproat</i>	
1. Introduction	103
2. Chemical synthesis of oligoribonucleotides and oligo(2'-O-alkylribonucleotides)	104
Advantages of using antisense oligonucleotides for studying RNP structure and function	104
General points concerning the chemical synthesis of oligoribonucleotides	104
Chemical synthesis of oligoribonucleotides	106
Chemical synthesis of oligo(2'-O-methylribonucleotides) and oligo(2'-O-allylribonucleotides)	108

3. Antisense affinity selection of RNAs or RNP complexes	110
Strategy	110
Probes for affinity selection	111
Biotin-streptavidin affinity selection of RNP complexes	113
4. Depletion of cell extracts of RNAs or RNP complexes using affinity selection with antisense oligonucleotide probes	117
5. Analysis of proteins in RNP complexes purified by affinity selection with oligonucleotide probes	120
Introduction	120
Antisense affinity selection of RNP complexes from precleared cell extracts	120
6. Targeted RNase H cleavage of RNA	123
7. Analysis of RNAs and RNPs by gel electrophoresis	126
Introduction	126
RNA separation by denaturing polyacrylamide gel electrophoresis	127
Separation of RNP complexes by electrophoresis in native polyacrylamide-agarose gels	128
Transfer of RNAs from gels by electroblotting	130
Analysis of RNAs by Northern hybridization with riboprobes	131
8. Chemical modification interference analysis of RNA	134
Strategy	134
3' End-labelling of RNA using RNA ligase	135
Chemical modification of RNA at purine and pyrimidine bases	136
Cleavage of modified RNA with aniline	138
References	139
<b>5. Analysis of ribonucleoprotein interactions</b>	141
<i>Cindy L. Will, Berthold Kastner, and Reinhard Lührmann</i>	
1. Introduction	141
2. Immunoaffinity purification of RNP complexes	142
Strategy	142
Immobilization of antibodies on Sepharose matrices	142
Immunoaffinity chromatography of snRNPs	145
3. Ion-exchange chromatography of snRNPs	149
4. Analysis of snRNP protein and RNA by gel electrophoresis	151
5. Reconstitution of snRNPs from purified RNA and protein	156
Introduction	156
Preparation of snRNP protein	156
RNA preparation and snRNP reconstitution	158

6. Analysis of protein–RNA interactions by immunoprecipitation of snRNPs	159
Strategy	159
Immunoprecipitation of snRNPs	160
Analysis of immunoprecipitated snRNPs	162
7. Analysis of RNA–protein interactions by UV cross-linking	163
Strategy	163
snRNP preparation and UV irradiation	164
Analysis of the extent of UV cross-linking	165
Identification of cross-linked proteins	165
Identification of RNA cross-link sites	167
8. Mapping of RNA–protein interactions by RNase protection	168
9. Immunoelectron microscopy of snRNP particles	170
Introduction	170
Stabilization of snRNP–protein interactions for immunoelectron microscopy	170
Formation of antibody–snRNP complexes	171
Preparation of samples for electron microscopy	174
Investigation of snRNPs and snRNP–IgG complexes by electron microscopy	174
Acknowledgements	176
References	176
<b>6. Analysis of pre-mRNA splicing in yeast</b>	<b>179</b>
<i>Andrew Newman</i>	
1. Introduction	179
2. Expression of exogenous genes	179
Vectors	179
Transformation of yeast	180
3. Analysis of yeast RNA	182
Isolation of RNA from yeast	182
RNA analysis by primer extension	184
4. Genetic strategies for investigating pre-mRNA splicing	186
Isolation and characterization of <i>PRP</i> genes and their products	186
Genetic approaches to splicing based on interactive suppression	187
Functional analysis of splicing factors <i>in vivo</i>	188
5. Analysis of RNA splicing in yeast extracts	190
Preparation of active extracts from yeast	190
Splicing reactions <i>in vitro</i>	191
Depletion of components from splicing extracts	193
References	194

Appendix: Suppliers of specialist items	197
Contents of Volume II	203
