ROOT PHYSIOLOGY: FROM GENE TO FUNCTION

1. Preface	vii
2. Root nitrogen acquisition and assimilation A.J. Miller and M.D. Cramer	1
3. Phosphate acquisition K.G. Raghothama and A.S. Karthikeyan	37
4. Root-based N ₂ -fixing symbioses: Legumes, actinorhizal plants, <i>Parasponia</i> sp. and cycads J.K. Vessey, K. Pawlowski and B. Bergman	51
5. Mycorrhizas: Gene to function J.H. Graham and R.M. Miller	79
6. Cluster roots: A curiosity in context M.W. Shane and H. Lambers	101
7. The roots of carnivorous plants W. Adlassnig, M. Peroutka, H. Lambers and I.K. Lichtscheidl	127
8. Roles of aquaporins in root responses to irrigation R. Vandeleur, C. Niemietz, J. Tilbrook and S.D. Tyerman	141
9. Mechanisms of plant resistance to metal and metalloids ions and potential biotechnological applications A.A. Meharg	163
10. The physiology, genetics and molecular biology of plant aluminum resistance and toxicity L.V. Kochian, M.A. Pieros and O.A. Hoekenga	175
11. Acclimation to soil flooding – sensing and signal-transduction E.J.W. Visser and L.A.C.J. Voesenek	197
12. Root defense responses to fungal pathogens: A molecular perspective P.A. Okubara and T.C. Paulitz	215
13. Soil microorganisms: An important determinant of allelopathic activity Inderjit	227
14. Facilitative root interactions in intercrops H. Hauggaard-Nielsen and E.S. Jensen	237
15. Root-to-shoot signalling: Assessing the roles of up' in the up and down world of long-distance signaling <i>in planta</i> I.C. Dodd	251
